1.2. GetAcctEINHistory – getting EIN history

The service gets the history/ list of transactions from a given account with respect to the Electronic Identification of Receivables service (Polish: EIN). The service enables users to get history 90 days back.

- ISO 20022 requirements affect the result of the service invocation (response).
- Until 15 June the service will not return unstructured addresses.

Output parameters Structured address (ISO 20022 requirement)

Field required: R - required element, C – conditional element, empty - optional element

1.3. ImportTransactions – transfer of a batch of transactions for execution

The service transfers a batch of transactions for execution.

- ISO 20022 requirements affect the determination of the signature base and the input parameters of the service (request).
- Until 15 June the service will not return unstructured addresses.

Message signature base

- The signature base results from concatenation of fields:

(Execution date at the bank (DD-MM-YYYY format) + Debtor's account number + completed Transaction identifier + Reference + Transfer debit amount + Transfer currency symbol + Counterparty name + Counterparty address (**AdrLine field**) + Counterparty account number + Account number for charges + **Beneficiary bank (code BIC)** + **Beneficiary country code** + Negotiation number + Negotiation rate) + (completed Transaction batch identifier + user NIK + Processing level) + (company NIK + value '1' + Time stamp)

For unstructured addresses (current):

- the signature base should contain the field: Counterparty address (the line must not be completed in relation to transactions with an execution date falling after 20 November 2025),
- If PstlAdr is used in the signature base the Bank country code should still be completed (two characters, based on the PstlAdr.Ctry field).

For structured addresses (new ISO 20022 format):

- the signature base should not contain the following fields: Counterparty address,
- in the signature base, the Beneficiary country code cannot be filled in PstlAdrStr field

Input parameters – structured address (ISO 20022 requirement)

This section is not required for EEA countries* (required for other countries). If it is used, the *required or not* field column in the table should be consulted. This object replaces PstlAdr (it must not appear jointly with this section).

Field required: R – required element, C – conditional element, empty - optional element

SEPA conditions

All the following conditions have to be met for a payment to be treated as a SEPA bank transfer:

- the beneficiary's bank participates in SEPA (Single Euro Payments Area),
- the beneficiary's bank BIC must participate in SEPA settlements, counterparty account number must be in IBAN format,
- normal priority must be used – fixed value: NORM,
- it has to be noted that the sender of the payment and the beneficiary will pay all fees charged, fixed value: SHAR
- the currency must be EUR,
- the field **counterparty name must have the following value: max string(70).**

2. Error message

Error message that occurs when the address structure does not comply with ISO 20022 or in the case of transfer of unstructured data after 20 November 2025:

B2B error code	B2B error description	Comments
111	Address structure non-compliant with ISO 20022	

Example of response

```
